Hawaii Information Consortium General Manager's Report

**MARCH - MAY 2014**

## Executive Summary

In the past three month, the new State website, Hawaii.gov. continued to receive national recognition from awards and presses. The portal has taken a significant step toward making the citizen's online interaction with the state government more personalized and fun experience, through the launch of the my.hawaii.gov. We provided a quick walk-through of features at <http://m.hi.gov/win> It is a first of its kind approach to the gamification of government. HIC also won the Best Place to Work in Hawaii in the small business category.

## Appendix C: Web Analytics Terms

- **Hit** - A request for a file from the web server. Available only in log analysis. The number of hits received by a website is frequently cited to assert its popularity, but this number is extremely misleading and dramatically over-estimates popularity. A single web-page typically consists of multiple (often dozens) of discrete files, each of which is counted as a hit as the page is downloaded, so the number of hits is really an arbitrary number more reflective of the complexity of individual pages on the website than the website's actual popularity. The total number of visitors or page views provides a more realistic and accurate assessment of popularity.
- **Page View** - A request for a file whose type is defined as a page in log analysis. An occurrence of the script being run in page tagging. In log analysis, a single page view generates multiple hits as all the resources required to view the page (images, .js and .css files) are also requested from the web server.
- **Visit / Session** - A series of requests from the same uniquely identified client with a set timeout. A visit is expected to contain multiple hits (in log analysis) and page views.
- **Visitor / Unique Visitor** - The uniquely identified client generating requests on the web server (log analysis) or viewing pages (page tagging). A visitor can make multiple visits.
